

Can Supplement Filtered Water with UV or Ozone

Can lose its fresh, delicious taste whether it is filtered with UV or ozone. Can you keep your Quench filtered water fresh and great-tasting?

Quench recommends pairing your water filtration with a highly advanced and proven non-mechanical water treatments: ultraviolet or ozone technologies.

UV Water Treatment

UV water treatment keeps your water fresh by keeping it free from bacteria and other contaminants.

UV water treatment is a non-mechanical water treatment technology that uses ultraviolet light to kill bacteria and other contaminants. It is a highly advanced and proven non-mechanical water treatment technology.

UV water treatment is a non-mechanical water treatment technology that uses ultraviolet light to kill bacteria and other contaminants. It is a highly advanced and proven non-mechanical water treatment technology.

Ozone Water Treatment

Ozone is a natural water treatment that kills bacteria and removes chlorine taste and odor. It is a highly advanced and proven non-mechanical water treatment technology.

UV/Ozone Treatment Better-Tasting

UV and ozone water treatment can be combined to ensure your drinking water is always fresh and great-tasting.

UV and ozone water treatment can be combined to ensure your drinking water is always fresh and great-tasting.

UV helps maintain freshness

UV helps maintain the freshness and taste of the filtered water and maintains the cleanliness of the reservoir.

Quench in-tank UV cycles on for 1 hour every 2 hours to ensure the UV light has contact with the water for at least 30 minutes for ultimate water freshness.

Recirculating UV helps clean the water in the reservoir.
