

Filtered Water for Productive Staff

Safety Leads to Efficient Environment

Safety- and standard-setting are vital for fostering a safe and productive work environment. When using traditional water jug dispensers, there are a lot of opportunities for avoidable accidents, like back injuries when employees try to install bulky and heavy 42-lb./19-kg. water jugs and slips and falls from open faucet leaks or haphazard wires. With the absence of plastic water jugs altogether, Quench bottleless water coolers eliminate these avoidable accidents.

Having properly hydrated staff is the key to keeping productivity and efficiency up, so everyone can perform to their best ability in a busy environment. With Quench's commercial water and ice machines, you'll never have to worry about running out of water.

Manufacturing's Most Trusted Filtered Water Provider

From the very beginning, Quench puts in the work to ensure that we understand the needs and requirements that you, your facility, and your employees need. In addition, our cold water dispensers and ice machines come standard with advanced sanitary design features like recessed spigots and touchless dispensing technology to reduce cross contamination and make water dispensing fast and easy.

Quench Customers

- Volvo
- Pepsico
- AirGas
- Cintas
- Sam Adams Brewery
- Goodyear
- Kraft Foods

quenchWATER+

Our associates used to leave tabs up on the 5-gallon water jug dispensers, which would cause spills in the warehouse. We switched to bottleless water coolers to keep the building clean and dry.
